We appreciate the contribution of our Network of Collaborators throughout the country.

AGRICULTURAL WEATHER OUTLOOK: MAY 19 TO 25, 2022:

**TEMPERATURES BELOW NORMAL, FOLLOWED BY A MODERATE
TEMPERATURE RISE, COUPLED WITH SCARCE PRECIPITATIONS,
FINAL SHARP TEMPERATURE RISE.**

The outlook will begin with cold weather due to the entry of marine winds in the preceding days. Tropical winds will return with little energy, not reaching the south, and leading to a weak temperature rise with little atmospheric humidity. Precipitation will remain scarce over most part of the agricultural area, while the Andes Mountain range will experience snowfalls throughout its extension. The process will end with a vigorous entry of polar winds, which will last for several days, with chances of frost throughout the west, south and east, the Eastern Region of Paraguay and the north of the Mesopotamia region.

SOYBEAN

Last week's dry weather favors fieldwork. To date, the oil crop is 77.6% collected. Weekly progress is estimated at 12.7 percentage points. While 85.8% of the first-crop soybeans were harvested, 62.1% of the area with second-crop soybeans has already been harvested. The national average yield is 0.08 Tn/Ha below our previous report, reaching 2.94 Tn/Ha with an accumulated production of 35.8 MTn. We maintain our production estimate of 42 MTn.

CORN

Over the last week, the collection of corn has expanded into the center and south of the agricultural area. Fieldwork has not yet managed to pick up pace as producers continue to prioritize the collection of soybean plots, both first and second. After revealing a weekly progress of 1.6 pp, 27.4% of the area throughout the country has already been collected. To date, the national average yield is 6.78 Tn/Ha. Under this scenario, we maintain our production projection for the 2021/22 campaign at 49 MTn.
