AGRICULTURAL WEATHER OUTLOOK MAY 16 TO 22, 2019

**TEMPERATURE RISE, FOLLOWED BY PRECIPITATIONS
OVER THE EAST OF THE AGRICULTURAL AREA. FINAL
SHARP TEMPERATURE DROP.**

At the beginning of the perspective, northerly winds will raise temperatures, with values above normal for this time of year in the north and center of the agricultural area. The South, however, will receive lower values. Besides, the entry of a storm front will bring precipitations of varying intensity. The most significant values will be observed in the east of the area. The front will be followed by the entry of winds from the southwest, which will drop temperatures sharply, with chances of frosts over the west, center and south of the Ag. region.

SOYBEAN

Harvest is 76,7 % complete. Second croppings are yielding above our initial projections. For this reason, we raise our final production estimate to 56 M tons. If Chaco, Santiago del Estero and the north of Santa Fe hadn't lost area due to the floods occurred, this new projection could have been even higher.

CORN

Over the last week, harvest expanded into the last early-planted plots in the center and south of the agricultural area. Late-planted corn is also being collected in Buenos Aires and Córdoba. To date, corn is 34% harvested. A large part of the 100,000 Ha collected have provided very good yields, thus maintaining the national average yield at 9.5 Tn / Ha. Our final production estimate remains at 48 MTn.

SORGHUM

Soggy soils and high grain humidity hinder the harvest of the cereal in the north of the country. Collection progresses at a good pace in the rest of the agricultural area. To date, grain sorghum is 37.2 % harvested out of the 730.000 Ha planted this season. Yields remain within the regional average in the center and south of the agricultural area, reaching 3.97 Tn/Ha. Current production is estimated at 1,000,000 Tn.
