## OUTLOOK SUMMARY WEEKLY AGRICULTURAL WEATHER OUTLOOK

BUENOS AIRES GRAIN EXCHANGE

**December 23, 2015**

### AGRICULTURAL WEATHER OUTLOOK: DECEMBER 24 TO 30, 2015: VERY WARM WEATHER, COUPLED WITH PRECIPITATIONS OF VARYING INTENSITY, HEAVY STORMS OVER THE FLUVIAL LITTORAL, FOLLOWED BY A MODERATE TEMPERATURE DROP.

At the beginning of the perspective the storm front present over the last days will complete its passage. At the same time, the entrance of southerly winds will bring cloudiness, humidity and mild weather to the center and the south of the Ag. region during the Christmas holidays. On the contrary, the north of the Ag. region and Paraguay will observe warm and rainy conditions. Northerly winds will soon return, raising temperatures and bringing atmospheric humidity and cloudiness to most part of the agricultural area amid an intense heat wave. Towards the end of the first stage in the perspective, the passage of a new storm front will bring precipitations mainly to the northeast of the Ag. region. The passage of both storm fronts during the first stage in the current perspective will lead to heavy storms over the north of the area, while the Center and South will report less intense values.

# SOYBEAN

Nationwide soybeans planting progress has covered 81.8 % of an area projected at **20,100,000 Ha** in the last seven days. Overall, a little less than 16.5 Mha have been incorporated, posting a week-on-week advance of 9.4 % and a YOY increase of only 0.6 %. So far, first planting plots have covered almost 90 % of projected area, while second planting plots account for nearly 50 % of projected area.

The most significant planting progress over the last seven days was observed in Córdoba and Buenos Aires. Both provinces report good water supplies and relevant harvest progress for wheat and barley, which has promoted a steady planting advance, both on first and second plots. Toward the north of the country, soybeans planting are starting to gain traction in the NW and NE Areas. Plot incorporation in both regions is limited by a scarce water supply, though there are chances of rain for the next few days, which would replenish the fields and thus turn around current conditions.

SOYBEAN PLANTING			As of: Dec. 23, 2015	
2014/15 Season		Hectarage (Ha)	Porcentage planted (%)	Hectares planted

# CORN

Commercial corn plots continued to be incorporated nationwide in the last week, corresponding to season 2015/16. Planting fieldwork was concentrated in the center of the national agricultural region. Rainfalls in the last few days have replenished moisture in parts of the province of Entre Ríos, although they also affected low fields in the center of the country. At the start of planting window, planting intention on late plots is showing a bullish trend in the NW and NE Areas. Consequently, planting intention remains at **2,850,000 Ha** for season 2015/16, down by -16 % from last season (year 2014/15: 3.4 MHa). Planting progress has covered 68.7 % of area so far, accounting for an overall 1.9 MHa.

## SUNFLOWER

Based on several crop tours around the main sunflower regions of the NE Area and mid-north of Santa Fe, as well as to the SE and SW of Buenos Aires, estimated area for season 2014/15 has been modified. New planted area estimated is reported as 1.18 MHa, and total production is entered at 2.45 MTn. These changes will have an impact on current planting estimation 2015/16, which is now posted at **1,220,000 Ha**, with a new YOY variance of 3.4 %, accounting for a reduction of 230 Mha from last report. On the other hand, harvest of first sunflower plots continue in the north of the country, where first progress results in the NE Area and the mid-north of Santa Fe have raised harvest progress rate to 2.6 % of suitable area, with a national average yield of 1.78 Tn/Ha and a partial volume accrued of 56 mTn.

# WHEAT

After surveying most of the national agricultural region, analyzing year on year variations of area for winter crops (wheat+barley) on the main wheat regions of the country, national planting estimation for 2015/16 is adjusted to **3,600,000 Ha**. This result accounts for a YOY decrease of almost -18 %, as well as a reduction by 100 Mha from last report. Harvest has covered 68.9 % of suitable area, yielding a national average of 2.8 Tn/Ha, and accruing a partial volume in excess of 6.4 million Tn.

In spite of current reduction of planting area, good productivities obtained in wide areas of the center of the ag region support projected production at **9,500,000 Tn**. On the other hand, if high expectations in the SE of Buenos Aires are realised, season will finish with an output volume above current projections.

# BARLEY

Based on analyses of participation and condition of winter crops in different areas of the agricultural region, first results report a higher proportion of barley over wheat in the SE of Buenos Aires, jumping from 600,000 Ha to 700,000 Ha planted with barley. On the other hand, the regions of the center and west of Buenos Aires-North of La Pampa reported a higher participation of barley, with an increase of 50,000 Ha from both regions combined. Consequently, total planting area for 2015/16 is estimated at 1,200,000 Ha, accounting for a YOY increase of almost 40 % from last season. Likewise, both expectations and yields obtained in the barley regions of the center and SE of Buenos Aires are ranging between 10 and 15 % above last season results. Consequently, barley harvest for year 2015/16 is projected to accrue total volume of **4,300,000 Tn**, accounting for a relevant increase from last season.
