OUTLOOK SUMMARY WEEKLY AGRICULTURAL WEATHER OUTLOOK

BUENOS AIRES GRAIN EXCHANGE

January 07, 2016

AGRICULTURAL WEATHER OUTLOOK: JANUARY 7 TO 13, 2016: COOL WEATHER, FOLLOWED BY INTENSE HEAT AND PRECIPITATIONS OF VARYING INTENSITY, STORMS OVER NOA AND THE NORTHEAST OF CUYO, AND ANOTHER OVER MISIONES AND PARAGUAY.

At the beginning of the perspective, the south of the Ag. region will remain under the influence of southerly winds, raising lows above normal. The north will continue affected by warm tropical winds that will cause high minimum temperatures. Northerly winds will soon return, expanding into most part of the agricultural area and leading to an intense heat wave. At the same time, there is forecast of precipitations of warm front, of varying intensity, with local storms: one over NOA, and another over Paraguay and Misiones.

SOYBEAN

To date, soybeans planting has covered 92.9 % of an area estimated at [20,100,000 hectares](#) nationwide for the current season. Within the last fifteen days, progress was posted at 11.1 percentage points, and a slight decrease of -0.6 points from the same period last season. Overall, planting has estimatedly covered an area of more than 18.6 Mha, and the remaining area lies mostly in the NW and NE regions, which have recently received heavy rainfalls that helped replenished soil moisture.

SOYBEAN PLANTING			As of: Jan. 07, 2016

CORN

The incorporation of commercial corn plots for season 2015/16 has continued to make progress nationwide in the last few weeks. Planting fieldwork was concentrated in the north of the national agricultural region. Precipitations registered in the NW and NE regions allowed to recover water supplies on the fields. These conditions take place at the start of regional planting window, therefore, planting intention on late and second plots is likely to improve. Consequently, planting projection remains at [2,850,000 hectares](#) for season 2015/16, down by -16 % from last season (2014/15: 3.4 MHa). Planting progress has covered so far 83.3 % of area, accounting for an overall 2.4 MHa.

SUNFLOWER

Sunflower harvest is in process over the north of the agricultural region, where climate conditions in the last fifteen days have boosted harvest fieldwork, raising progress rate to 9.4 % of suitable area. National average yield posted 1.85 tons/Ha, accruing a partial volume of 210 MTn. Overall, more than 100,000 hectares were harvested, accounting for a fortnight advance of 6.8 percentage points, and a YOY increase of 3.5 points. Although sunflower harvest has started only in the NE Area and mid-north of Santa Fe, and planting in the main growing regions of the south of Buenos Aires finished a few weeks ago, a first output projection is entered at **2,300,000 tons**, which might vary as fieldwork progresses toward the center and south of the agricultural region. Current projection reflects a fall by -8 % from last season (year 2014/15: 2.5 MTn).

WHEAT

Wheat harvest is developing normally in Buenos Aires, with the main progress rates observed in the last fifteen days in the regions of the north of La Pampa-west of Buenos Aires, center of Buenos Aires, SE of Buenos Aires and Cuenca del Salado. Accumulated rainfalls over most of Buenos Aires have partially interrupted harvest fieldwork; however, almost 2.9 MHa were harvested nationwide, accounting for 87 % of suitable area. Simultaneously, fortnight progress posted 18.1 percentage points, and YOY decrease was -8.9 points. National average yield amounts to 2.96 tons/Ha, and partial volume accrued is nearing 8.6 MTn.

Toward the wheat growing region of the south of Buenos Aires, which concentrates more than 24 % of wheat area, harvest has gained traction in the last fifteen days, yielding averages above initial expectations. Based on such volume increase due to higher yields in the region, productive estimation is raised to **10,100,000 tons** for the current season, up by 6.3 % from last publication, and posting a YOY decrease of -14 % (year 2014/15: 11.75 MTn).

BARLEY

Commercial barley harvest continues to make good progress. Yields obtained in the last two weeks maintain an upward trend and they support a larger barley production compared to last season. In addition, weather forecast predicts good conditions for harvest fieldwork, thus helping reduce loss. Consequently, harvest of season 2015/16 will render a total volume of **4,300,000 tons**, up by 10 % compared to the last five seasons. (average 2010/11-2014/15: 3.92 MTn)

Weather conditions in the center and south of Buenos Aires, which concentrate the 100 % of non-harvested area, were ideal for harvest fieldwork, due to low moisture and lack of rainfalls. Consequently, harvest progress in the last fifteen days was 32,8 percentage points, raising national harvest progress to 73,1 % of suitable area. In spite of a whole month of fluent fieldwork, harvest is delayed by 26,9 percentage points compared to last season. Such delay is due to planting interruptions, a low development of crop due to low spring temperatures and an increase of planted area compared to last season (barley 2014/15: 0.92 MHa; barley 2015/16: 1.2 MHa). Overall, harvested area is posted now at 786,000 Ha, with an average yield of 4.04 tons/Ha, and a total farm volume accrued of 3,180,000 Tn.
