AGRICULTURAL WEATHER OUTLOOK JULY 18 TO 24, 2019

TROPICAL WINDS, FOLLOWED BY PRECIPITATIONS OVER THE EAST OF THE AGRICULTURAL AREA. FINAL ENTRY OF POLAR WINDS.

At the beginning of the perspective, the entry of tropical winds will reach the north and center of the agricultural area. The South will remain under the effect of cold winds. Because of the influence of a polar air mass coming from the southwest, only the east of the agricultural area will receive significant precipitations. The center and west of the region will observe dry conditions. Towards the end of the perspective, the return of polar winds will lead to low temperatures with chances of frosts over the west, south and center of the agricultural region.

WHEAT

To date, wheat is 92.1% planted out of the 6.600.000 hectares projected for the season 2019/20. Over the last week, southern Córdoba and the north belt have finished planting. Both regions account for 20.5% of the total area. Most of the weekly progress took place in the center of Entre Rios, north of La Pampa and the west of Buenos Aires and it is estimated at 20 percentage points.

BARLEY

Over the last 15 days, barley planting has progressed significantly, reaching 81.6% of the total area projected for the current season. The south of the area reports a weekly progress of more than 30 percentage points. However, the end of planting is delayed in Córdoba due to water excess.

CORN

Over the last week, good weather conditions have fostered corn harvest. Weekly progress stands at 7.9 percentage points. The area harvested has been raised to 3.6 Mha. Most of the progress was observed in the north and center of the agricultural area, particularly in the provinces of Córdoba, Salta and Chaco. As regards yields, they maintain a positive trend and stand at 8.78 Tn/Ha. To date, production is estimated at 31.4 MTn.

WEEKLY AGRICULTURAL REPORT
